What is Data Science?

Data science is an interdisciplinary field that uses scientific methods, algorithms, and systems to extract knowledge and insights from structured and unstructured data.

Applications of Data Science

**Recommendation
Systems**

**E-commerce &
Marketing**

**Healthcare &
Medical Research**

**Social Media & Web
Analytics**

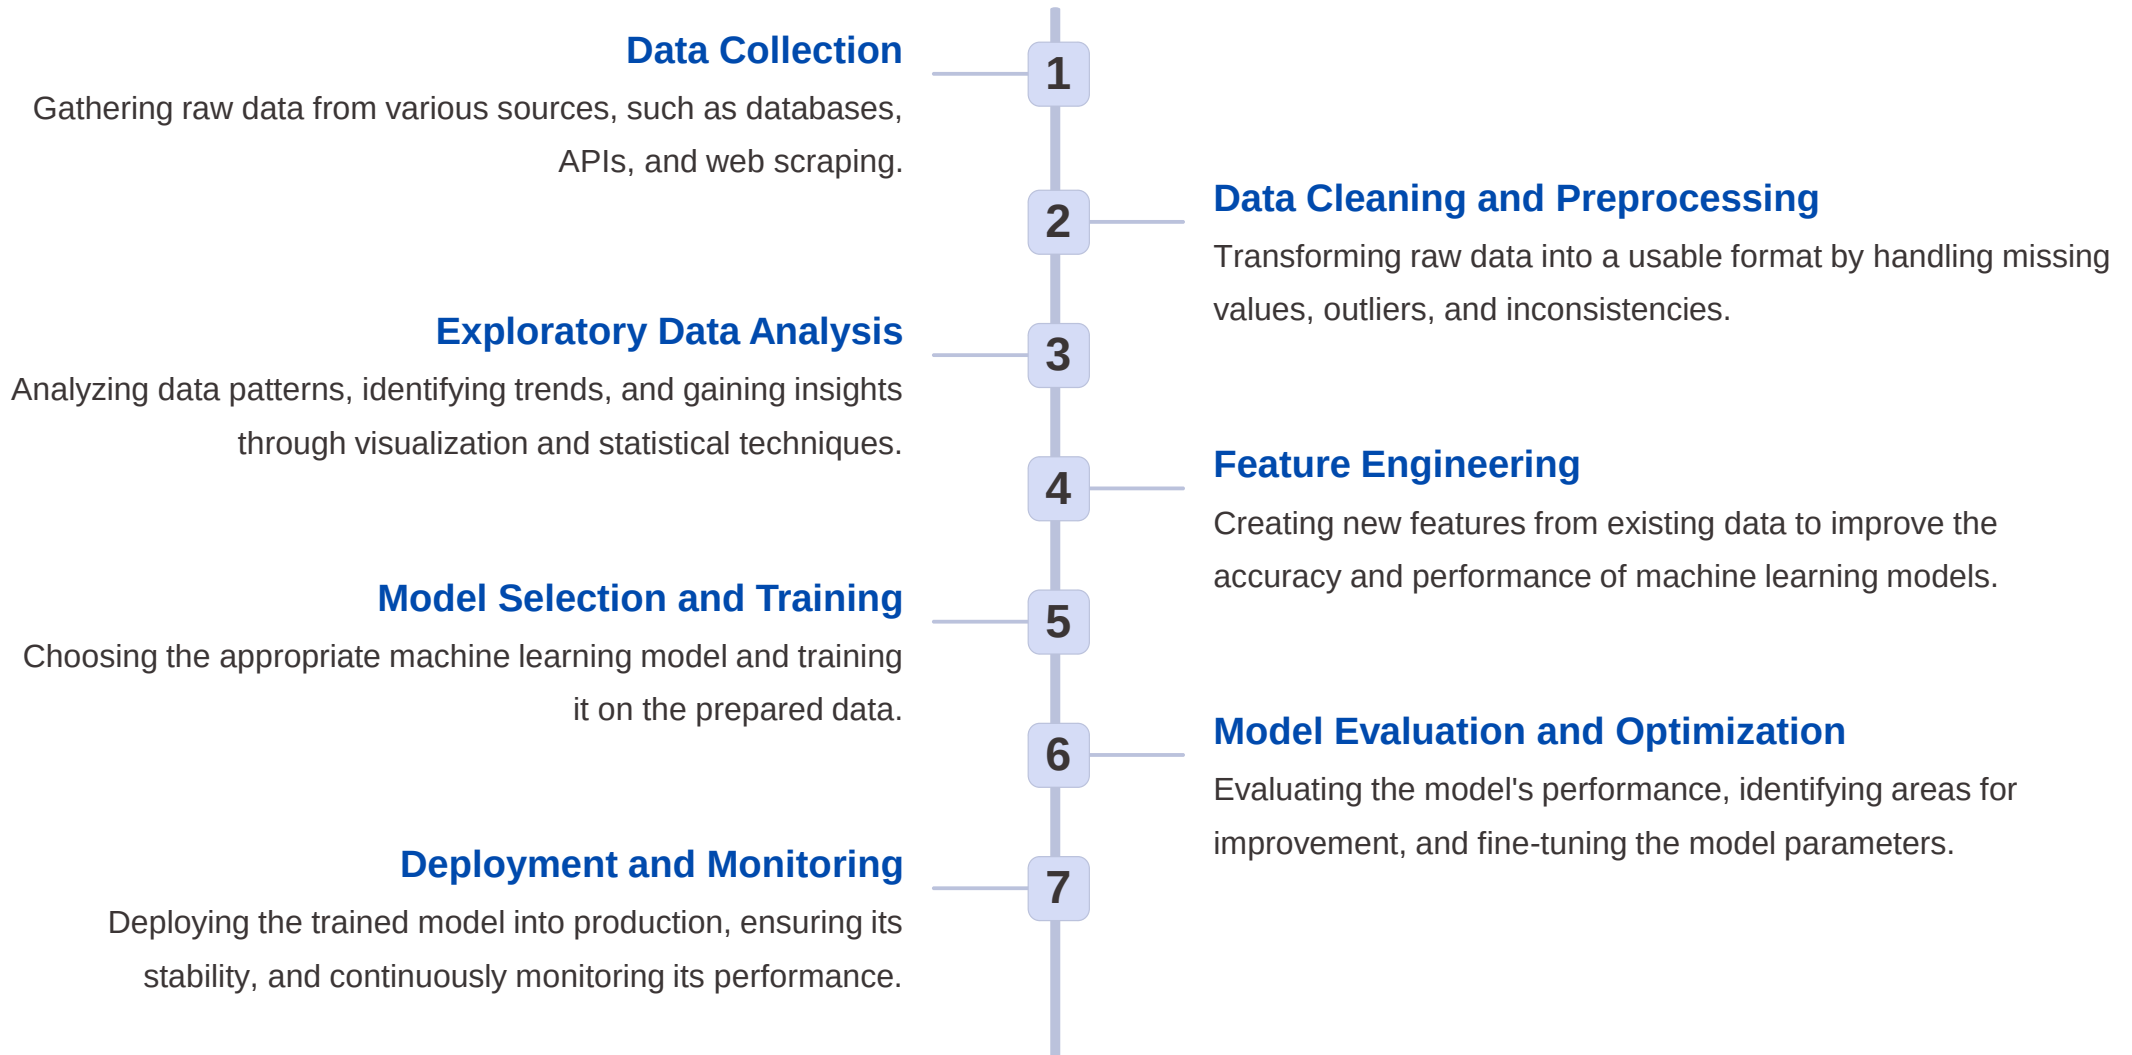

Finance & Banking

The Key Components of Data Science

Key Steps in Data Science

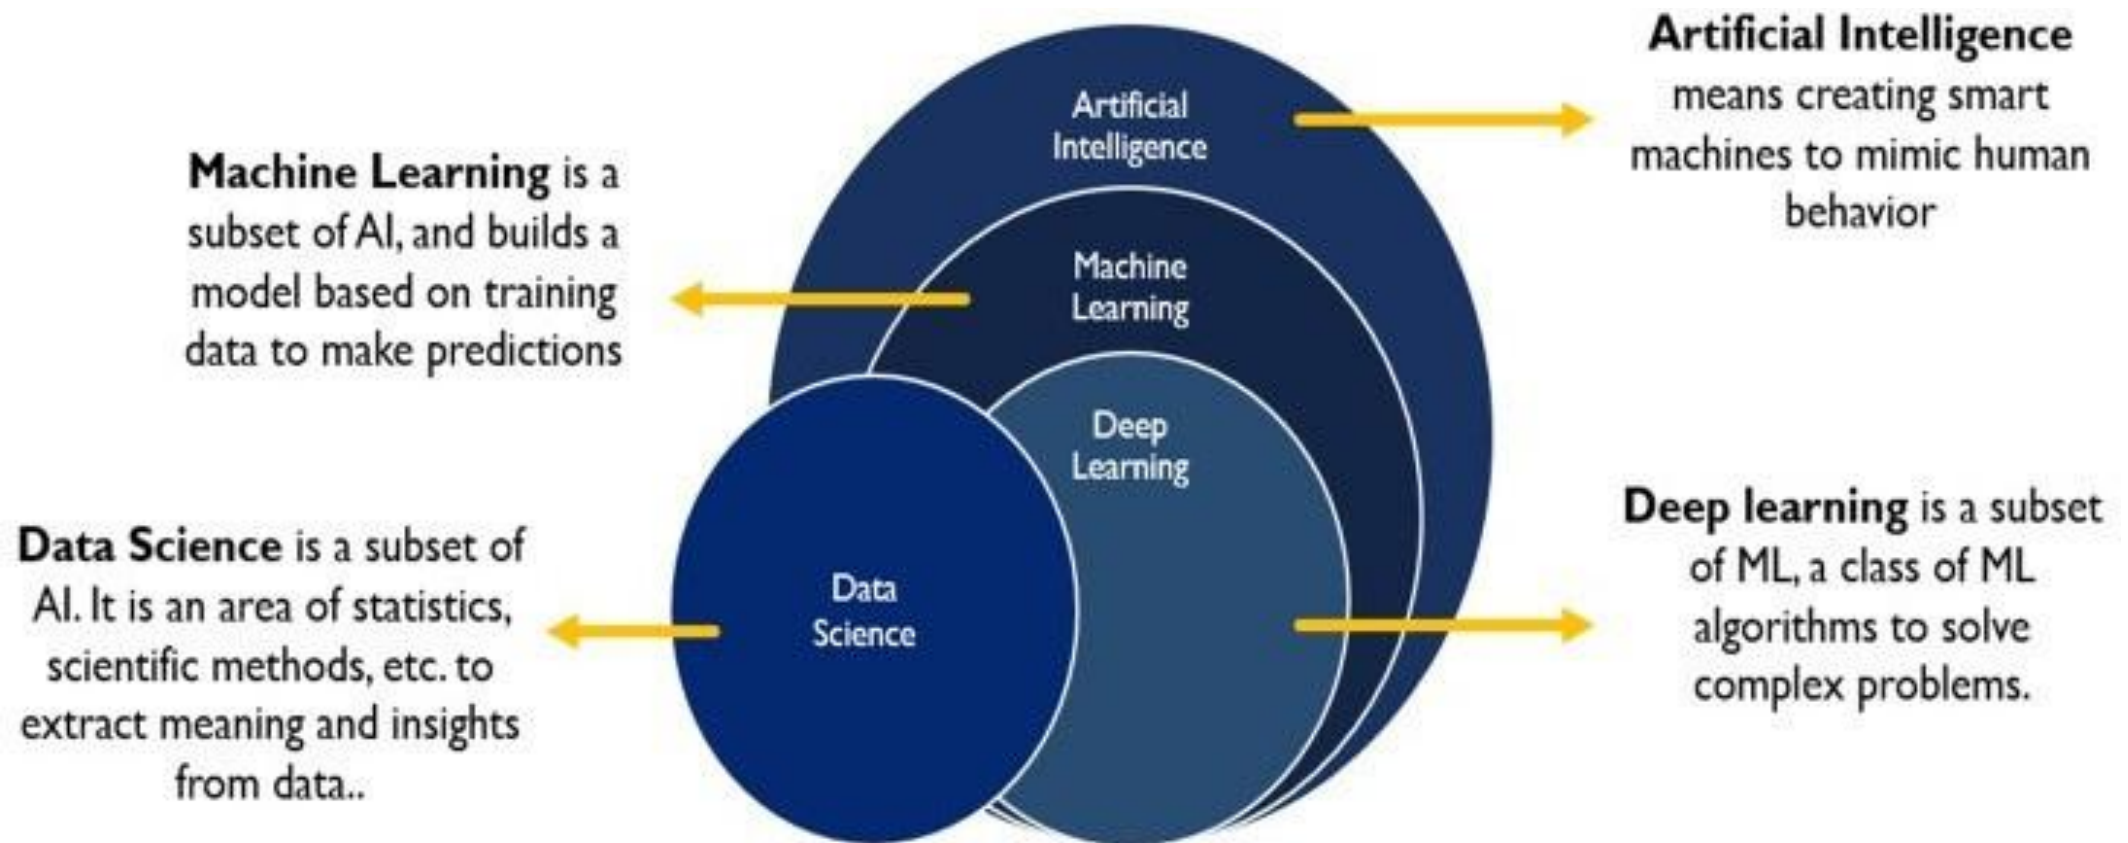

Data Science Process

What is AI?

Comparison Between AI and Data Science

Aspect	Artificial Intelligence (AI)	Data Science
 Definition	Developing intelligent systems that mimic human cognition	Extracting knowledge from data for business insights
 Goal	Automate processes and make smart decisions	Analyze data to find patterns and make predictions
 Subfields	<ul style="list-style-type: none">• Machine Learning (ML)• Deep Learning (DL)• NLP , LLM	<ul style="list-style-type: none">• Data Analysis• Data Mining• Statistics & Probability• Data Visualization
 Applications	<ul style="list-style-type: none"> Self-driving cars Virtual assistants (Siri, Alexa) Image recognition	<ul style="list-style-type: none"> Business analytics Movie recommendations (Netflix) Financial analysis Big data analytics
 Relationship	AI relies on data but uses algorithms to make intelligent decisions	Data Science can use AI as a tool for data analysis

What Is Machine Learning?

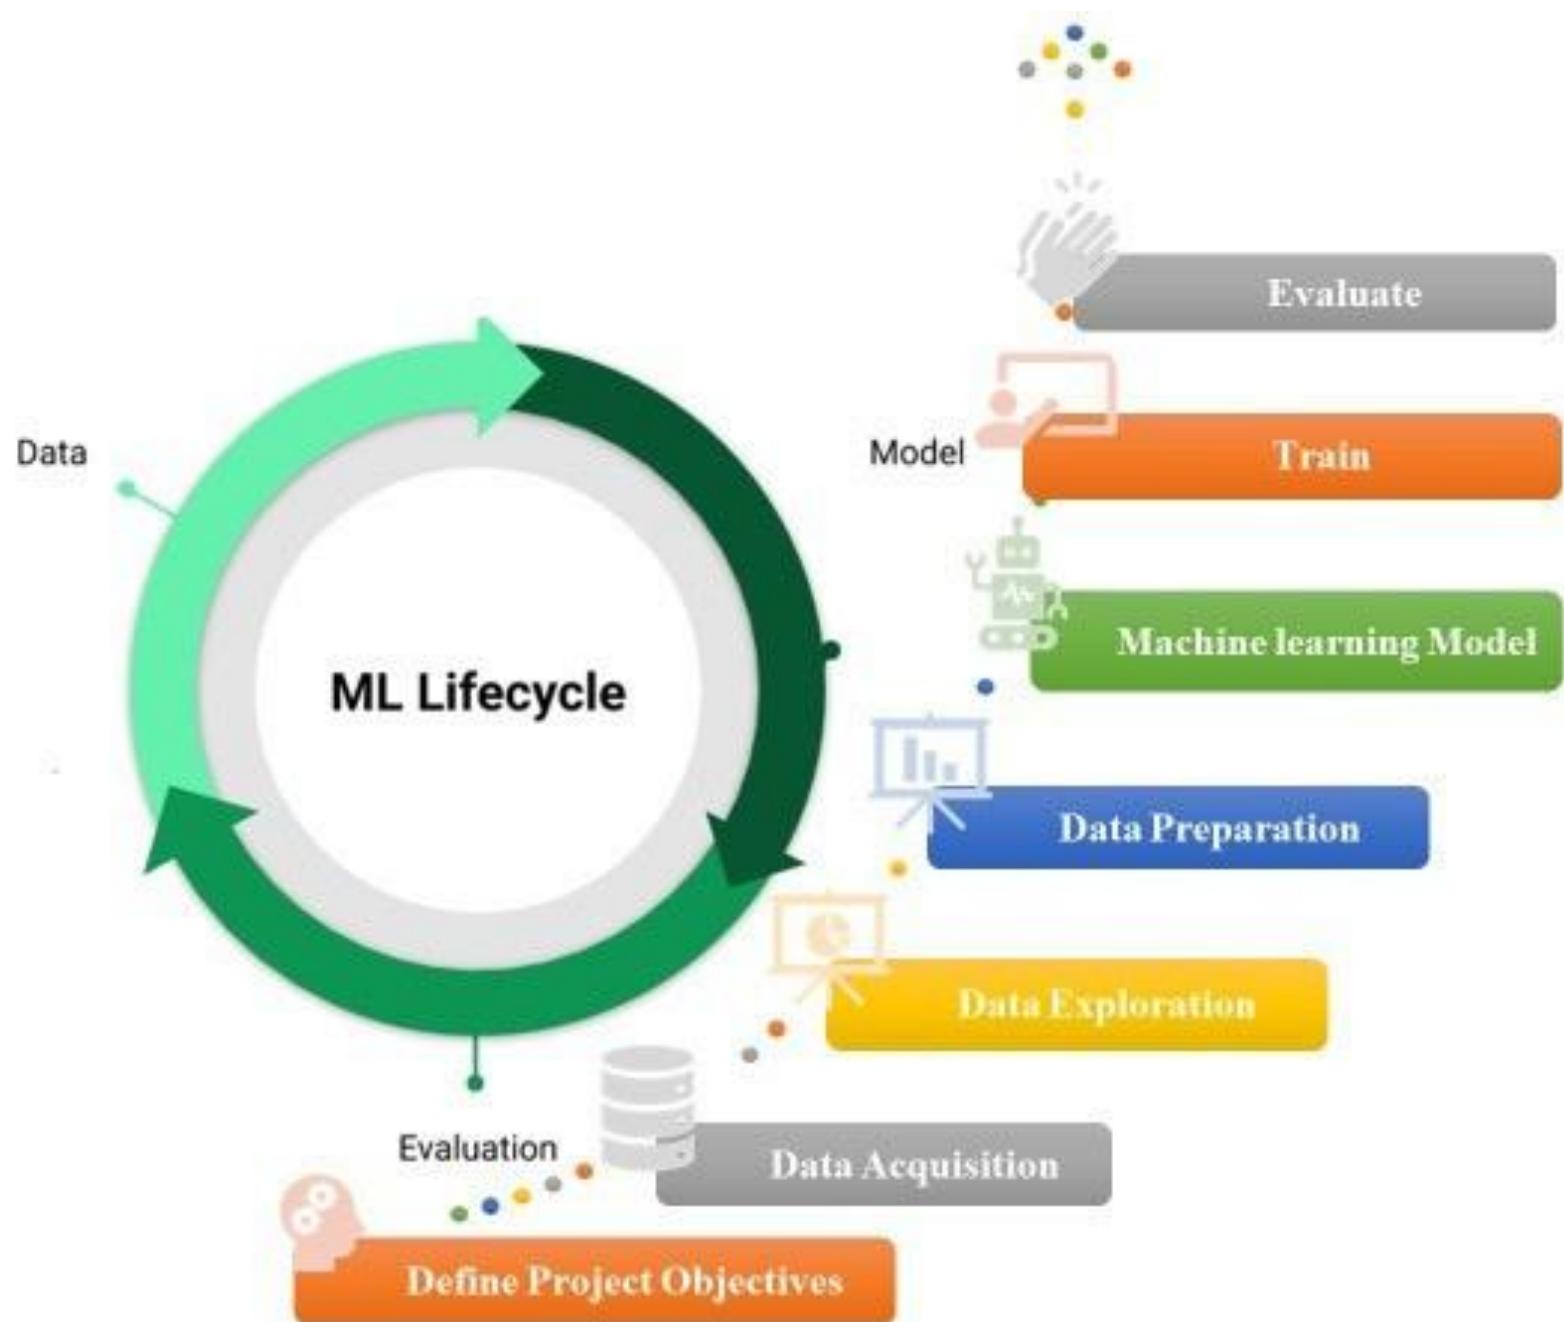

Software “models” are trained from data to predict certain patterns, trends, and outcomes

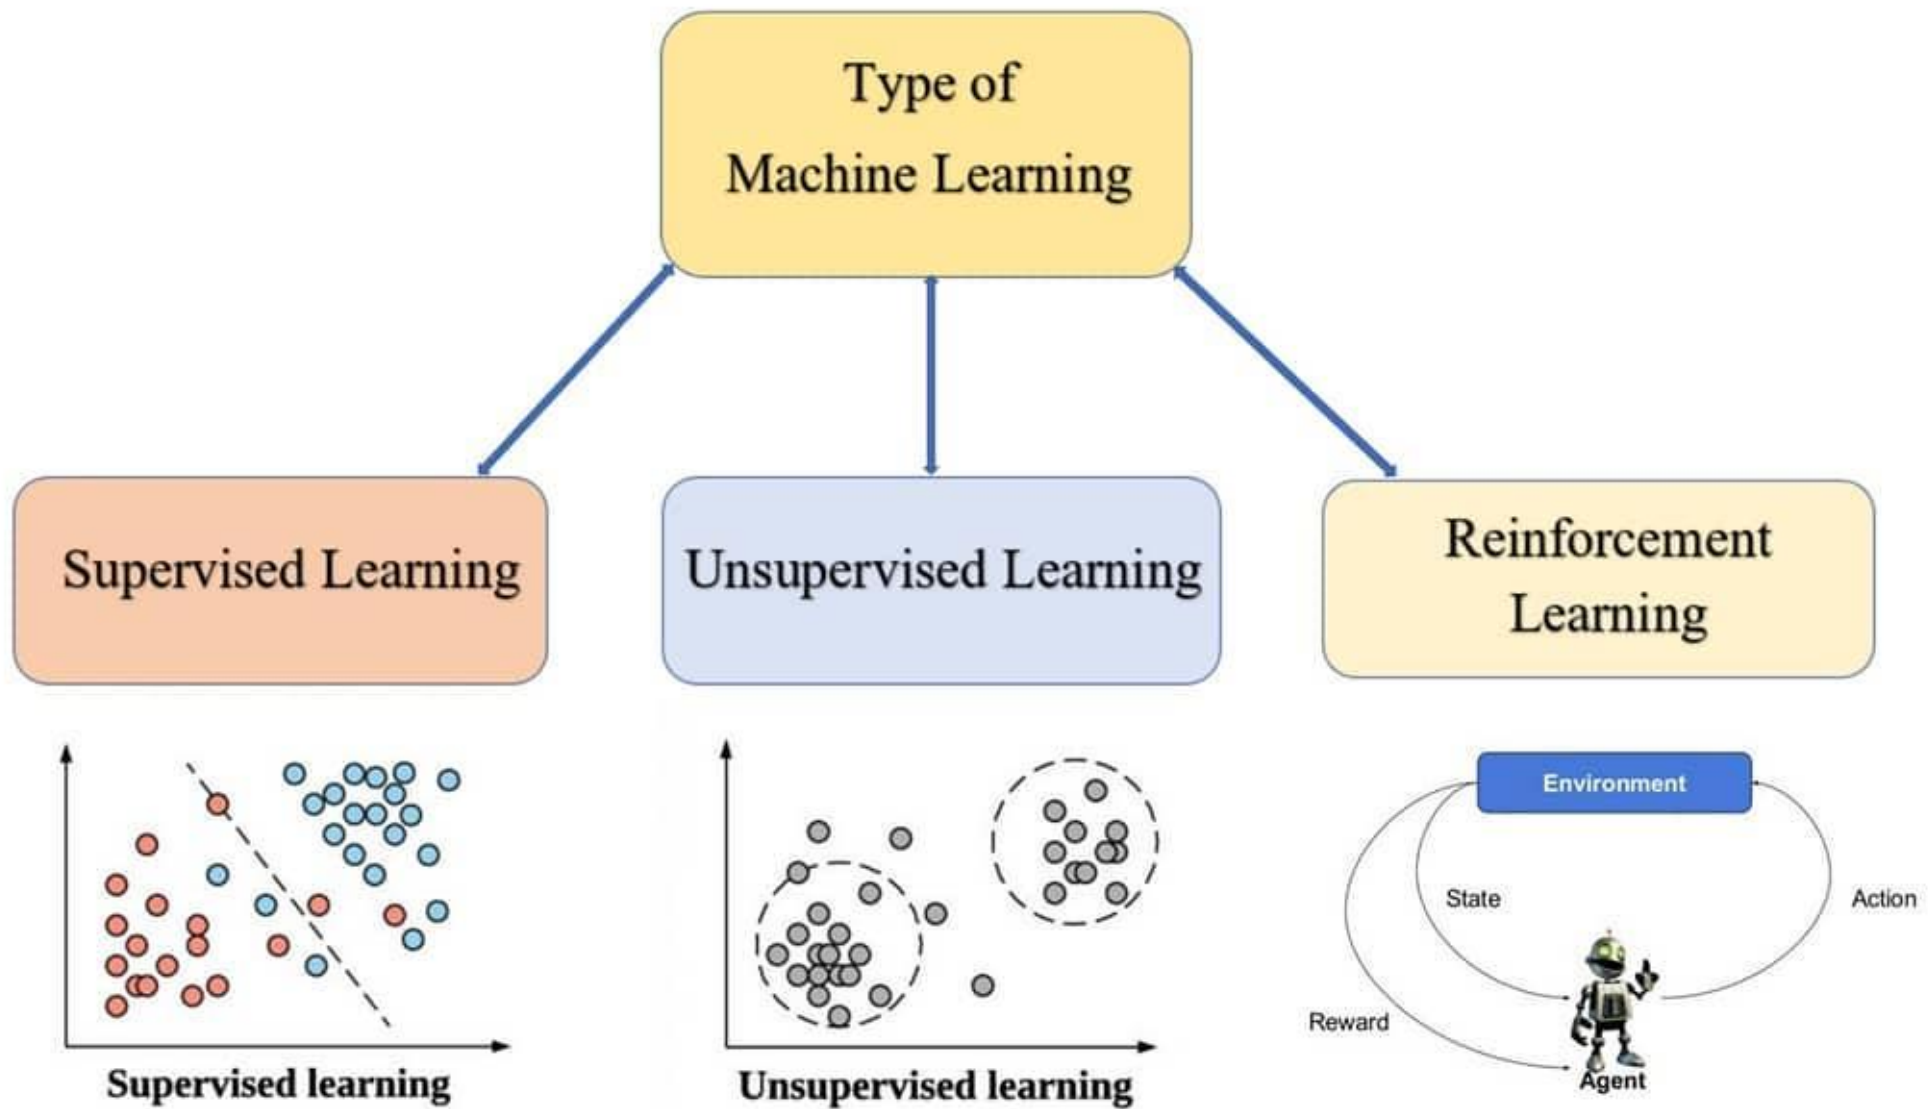

Traditional Programming

Machine Learning

Supervised Learning

Regression

What will be the temperature tomorrow?

84°

Fahrenheit

Classification

Will it be hot or cold tomorrow?

COLD

HOT

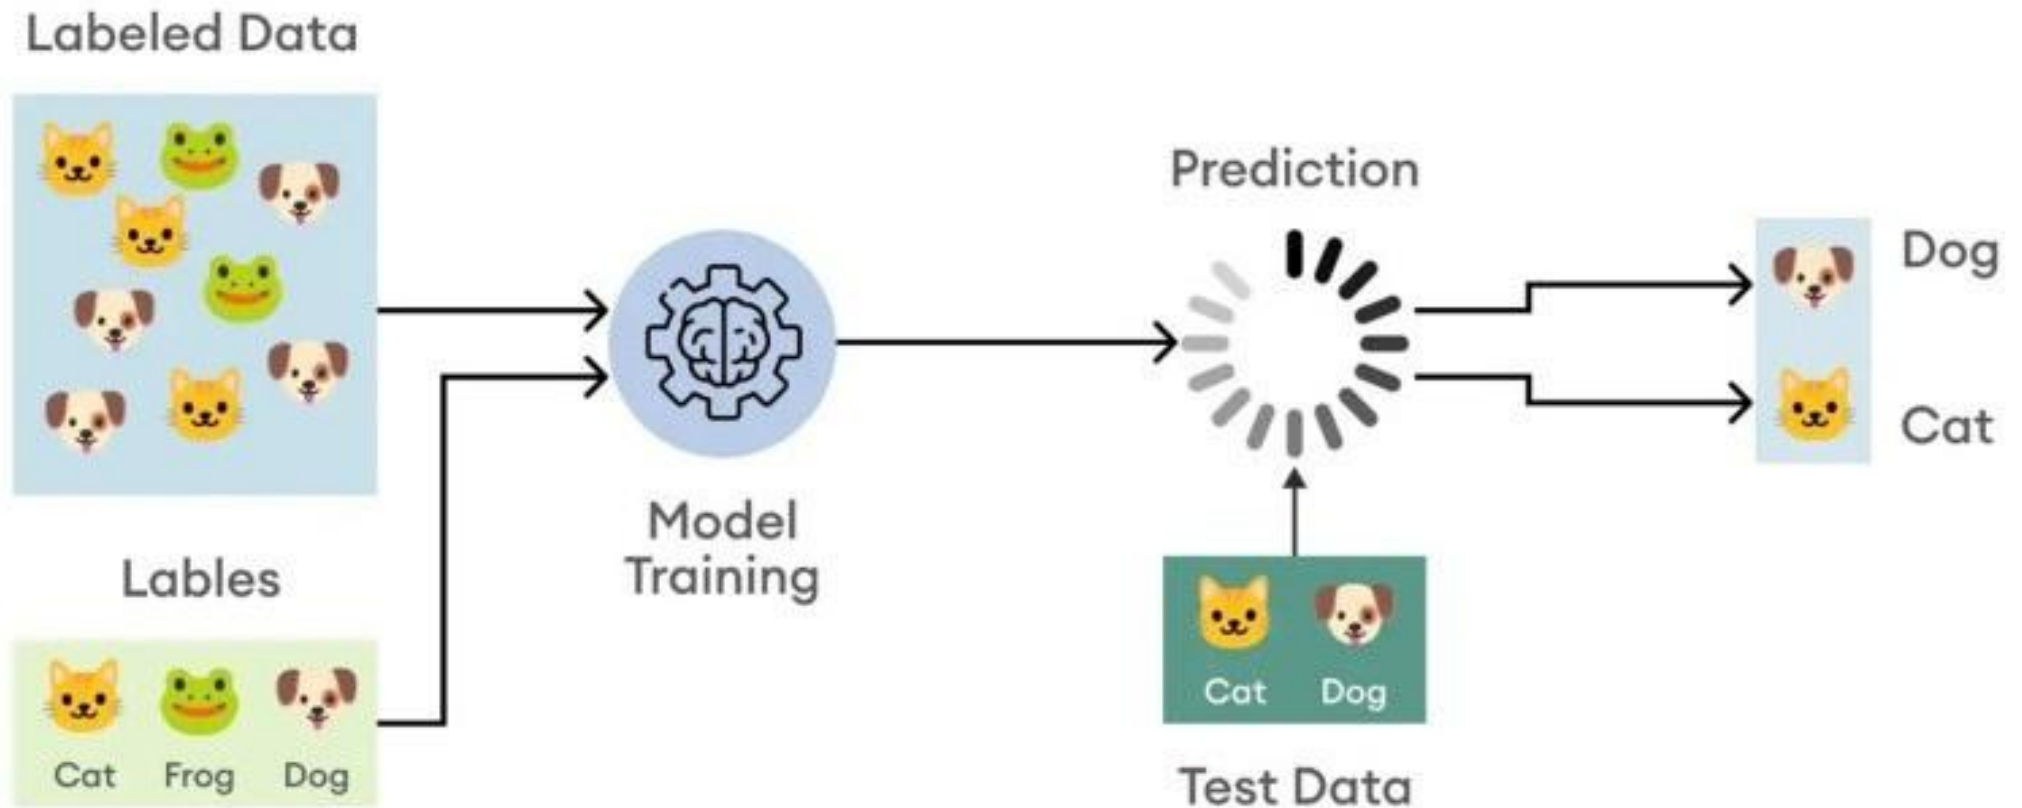

Fahrenheit

Supervised Learning

Classification

Types of Classification

Binary Classification

Multiclass Classification

Multilabel Classification

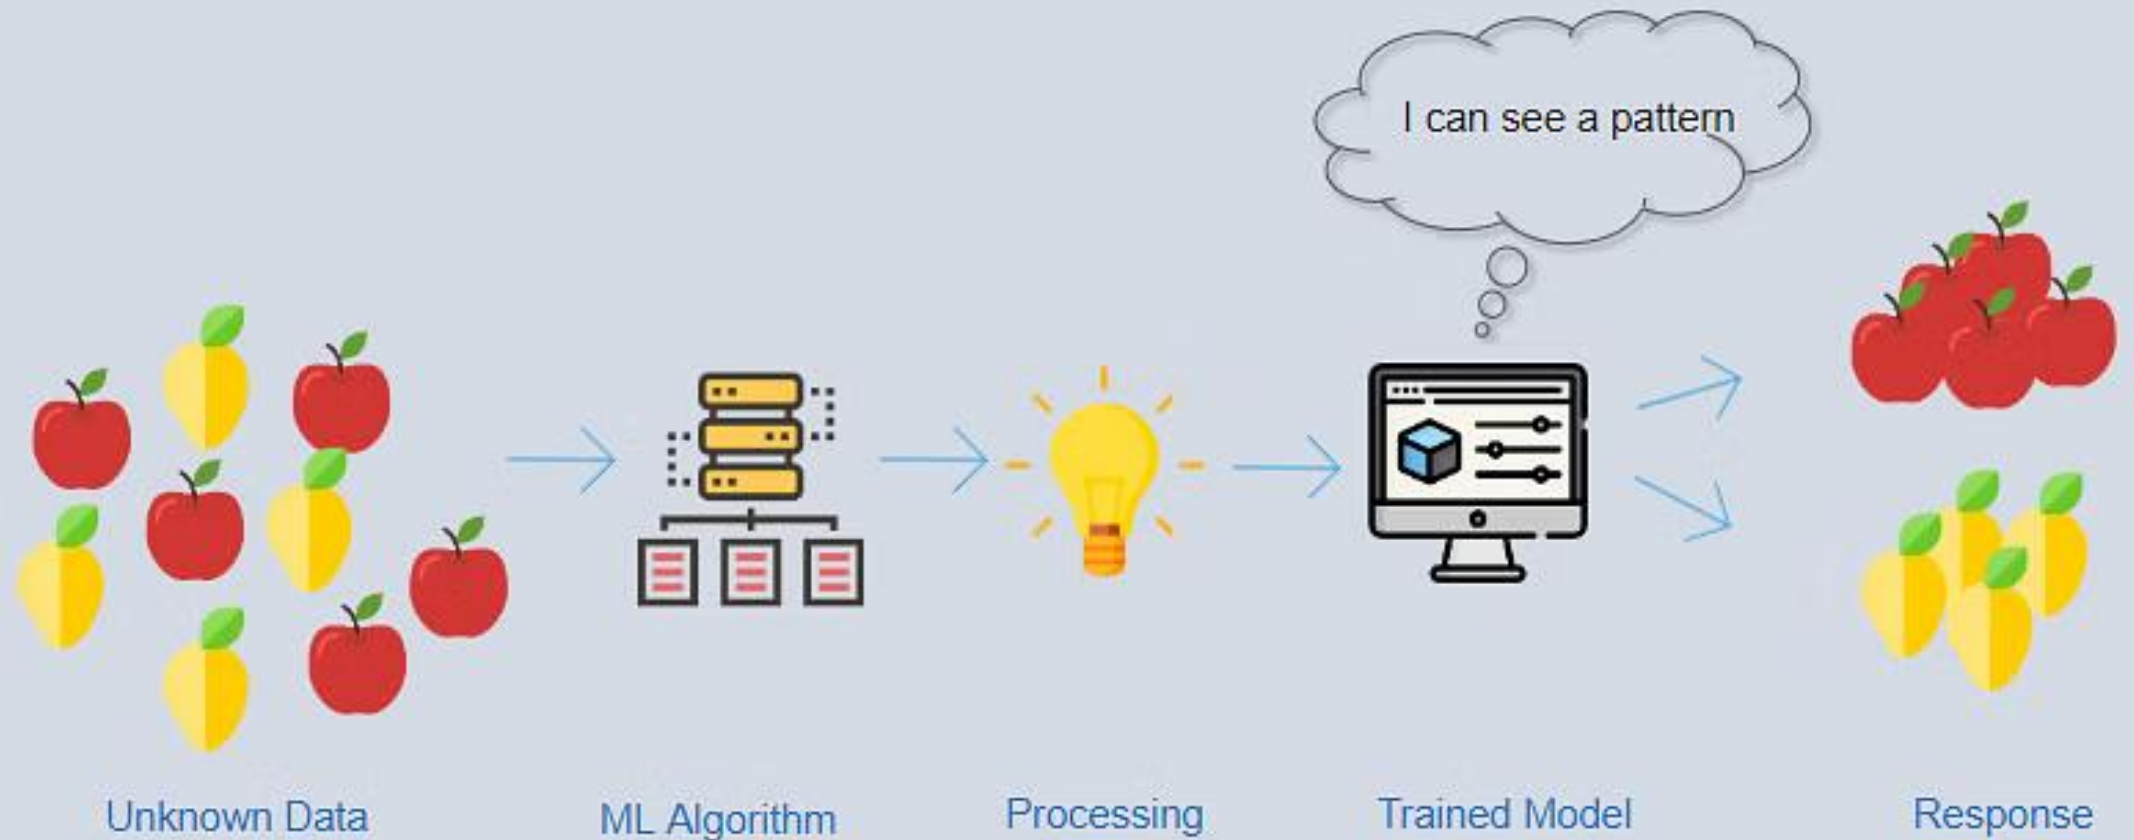

Regression

Unsupervised Learning

UNSUPERVISED LEARNING

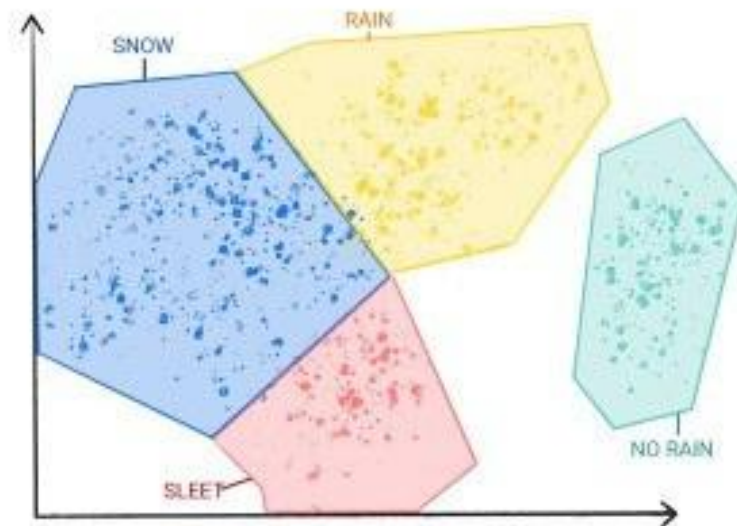

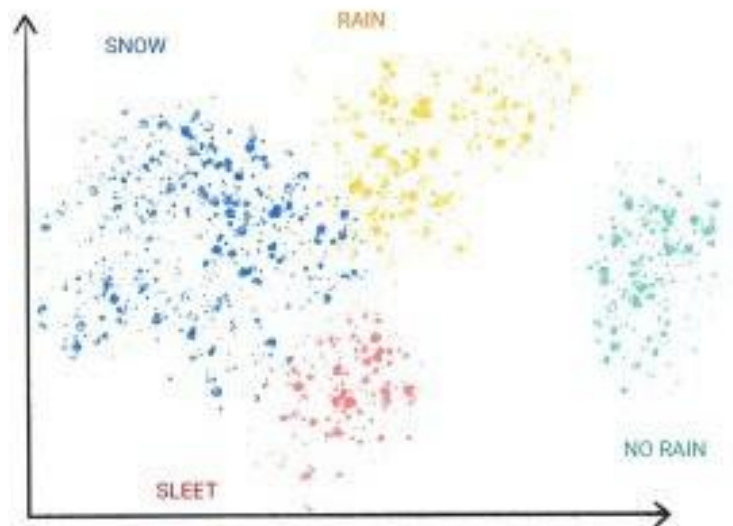

simplilearn

Unsupervised learning

Unsupervised learning

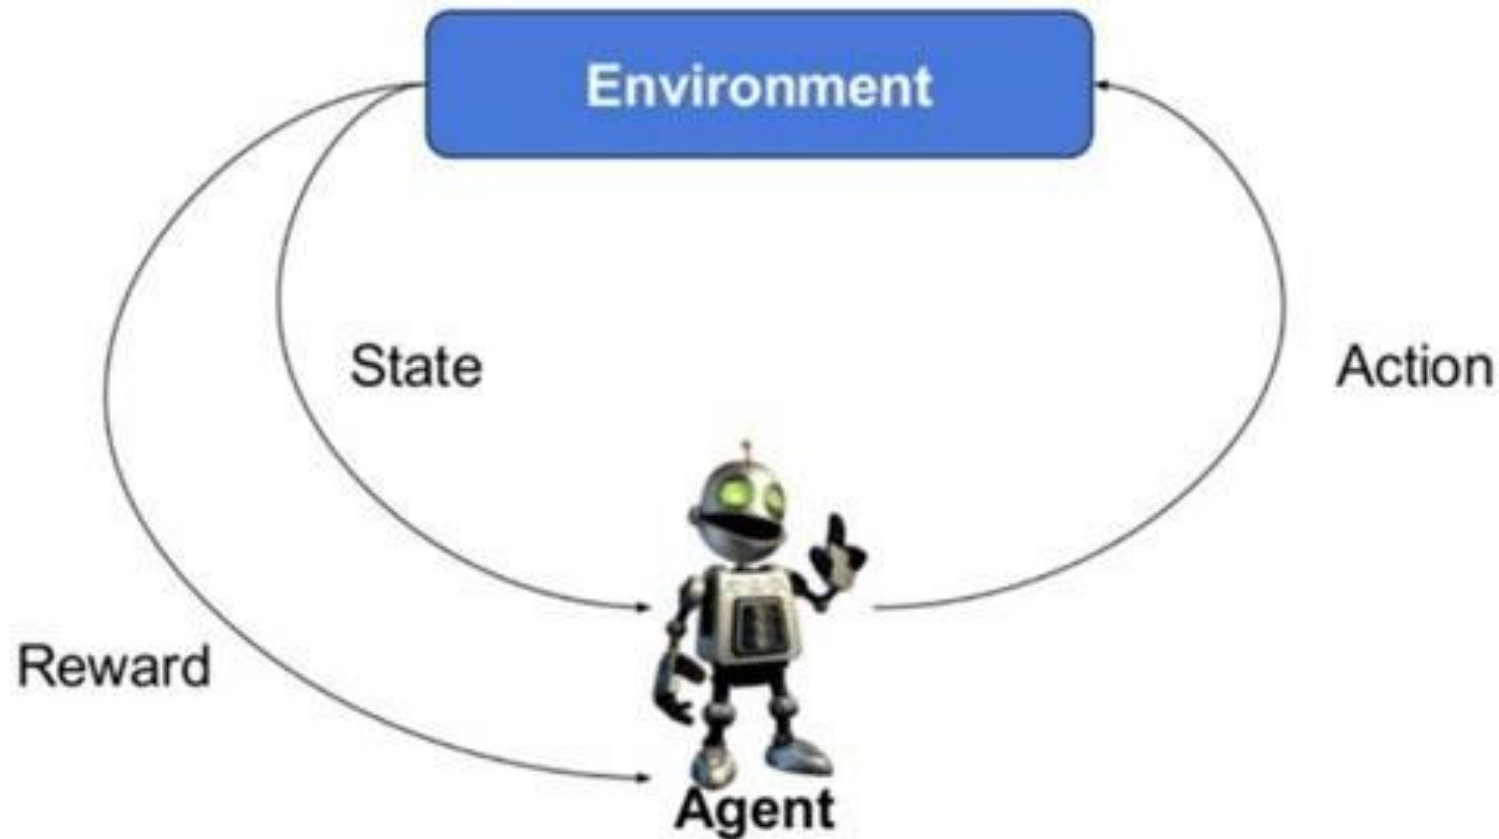

a) **Unsupervised learning**

b) **Supervised learning**

Reinforcement learning

1 Observe

2 Select action using policy

3 Action!

4 Get reward or penalty

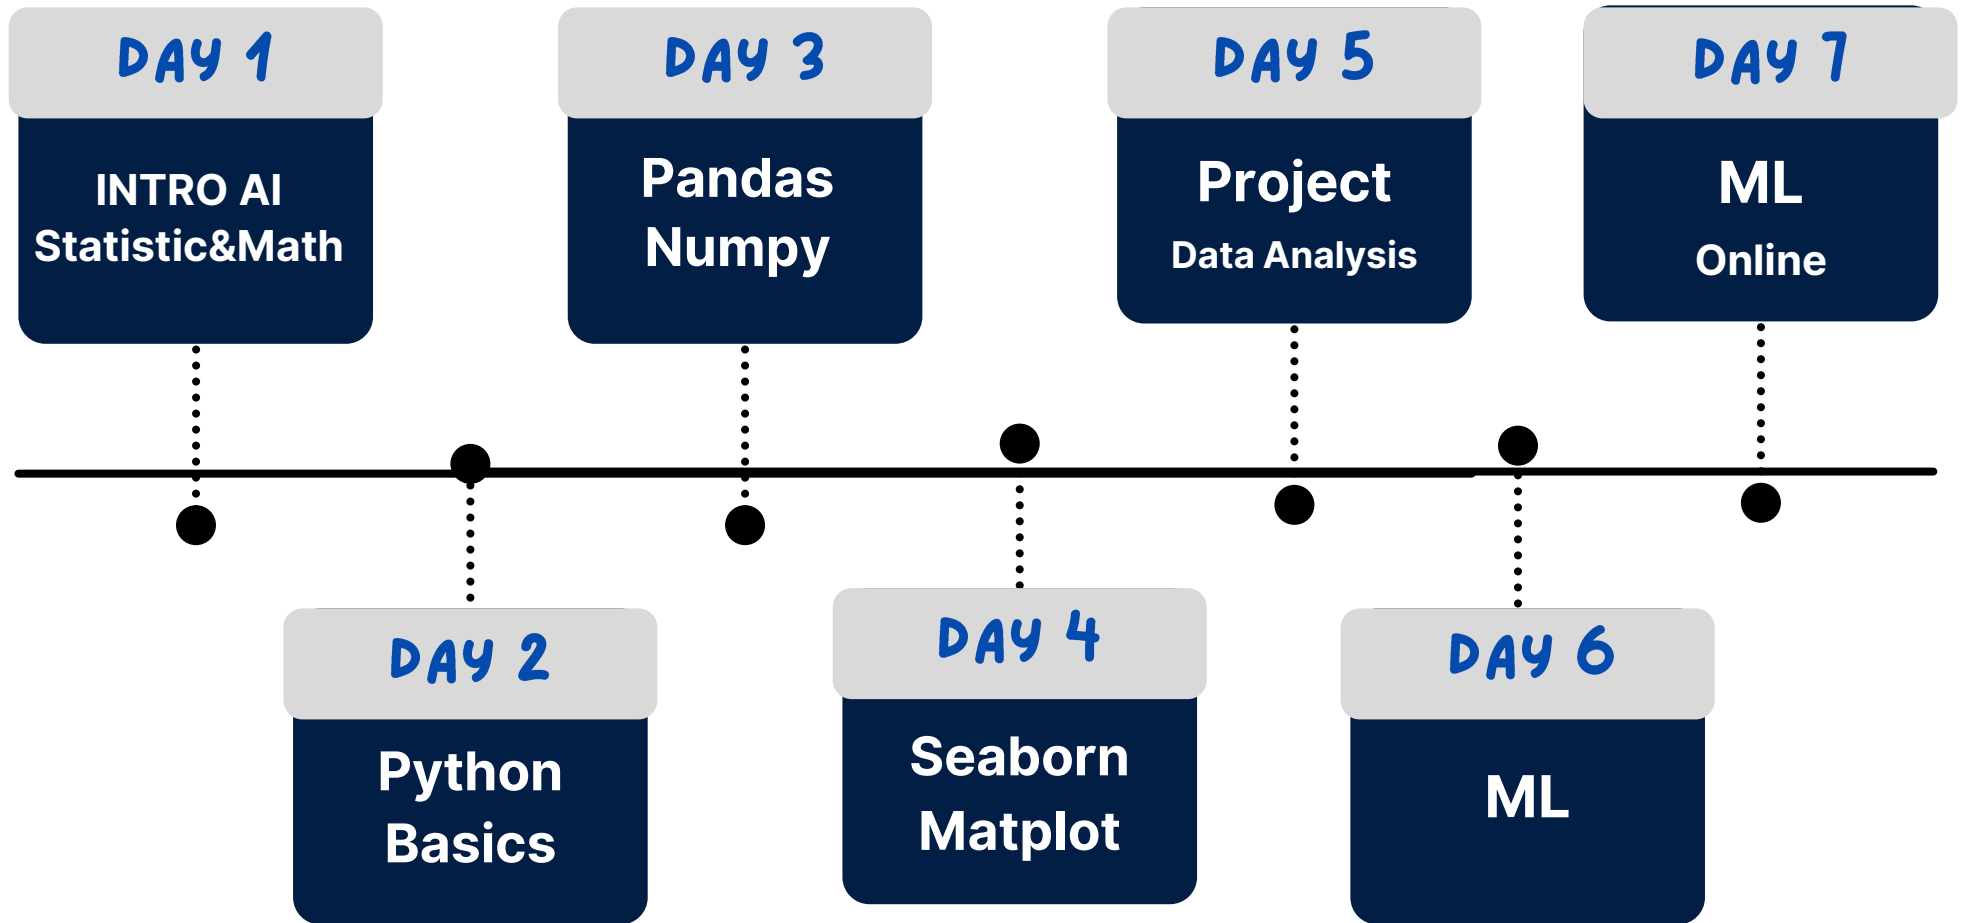

5 Update policy (learning step)

6 Iterate until an optimal policy is found
